

AIRCREW SURVIVOR

ULTIMATE WEAPON IN THE BATTLE FOR SAFE WATER

In the event of a downed aircraft, a planned quick exit of aircrew is paramount, and so is taking the correct equipment.

THE AIRCREW SURVIVOR IS IDEAL FOR A FAST EXIT

The Aircrew Survivor was developed by Aircrew for Aircrew. The 3L Hydration pack and purifier system is manufactured from Multicam Fire Retardant materials enabling use in flight, unlike other hydration systems.

The addition of Molle on the back allows for attachment to other packs whilst Molle on the front enables the carriage of more ammunition.

Drinking water at the source is potentially a dangerous activity because the hostile forces will be aware that water becomes a high priority very quickly. Collecting potentially contaminated water and purifying on the move is the only real option.

This innovative easy to use lightweight product uses Pure Hydrations tried and tested Mechanically Advanced Disinfection (MAD) in line Purifier water, meaning regardless of the source, water is automatically and instantly purified.

Why the Aircrew Survivor?

- ✓ Exceeds US EPA Guide Standard for Microbiological Water Purifiers and NSF protocols
- ✓ UK Compliance Water Quality Regulations 2000
- ✓ EU Compliance European Drinking Water Directive Council Directive 98/83/EC
